Ostatní stroje > pily > Saw with internal cut TS 23

Inv. číslo:	105575
Typ:	Saw with internal cut TS 23
Parametry:	170 mm, 1500 mm
Výrobce:	Mayer - Burger
Rok výroby/SO/GO:	1985/-/-
Lokalita:	Česká republika
Popis:	It is a special saw that is intended for very precise cutting of fine slices, similar to when slicing salami, see Fig. 3. A blank with a cylindrical diameter is placed on the work table. The saw blade, unlike standard saws, is attached to the saw blade and forms a bearing, which, however, unlike ordinary saws, does not consist of ball bearings, but of an air cushion - this prevents any shocks from the cutting tool - the saw. With this configuration of the storage of the saw blade and the bearing head, a precise cut without burrs is achieved. The saw has a spare head - a bearing for attaching the saw blade. Cut length. mat. max. 1500mm, cut diameter. mat. max. approx. 170mm. Machine dimensions: height 2000 mm, length 1700 mm, width 1600 mm. Weight up to 2t.
